ABSTRACT

This new edition has the same purpose as its predecessors: i.e., to provide language which can process information relating to all aspects of economic and social development, and, at the same time, give a common dimension to the more specific vocabularies corresponding to each of them. However, it differs from previous editions on five major counts: structure, field coverage, choice of national languages, number and form of descriptors, and printing. The structure provides alphabetical, descriptor group, and hierarchical displays, and a KWOC index including scope notes, broader, narrower, and related terms, and synonyms. The fields of study are further developed in such areas as population, health, environment, cultural development, communication, education, and energy conservation. The three languages used are those considered as the most significant and widely used in the development of literature: English, French, and Spanish: German has been dropped. The number of descriptors has doubled, despite removal of obsolete and irrelevant terms. Precoordination is used for precision where necessary, plurals are preferred to singulars, related terms are increased, the hierarchy has been improved, and scope notes have been revised to reduce ambiguity. Capital letters are used throughout in heavier and lighter print to increase readability. (RAA)

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

The Organisation for Economic Co-operation and Development (OECD) was set up under a Convention signed in Paris on 14th December 1960, which provides that the OECD shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in Member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in Member as well as non-member countries in the process of economic development;
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The Members of OECD are Australia, Austria, Belgium, Canada, Denmark, Finland, France, the Federal Republic of Germany, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States.

I. INTRODUCTION

The purpose of this new edition of the *Macrothesaurus* is no different from that of its predecessors. It endeavours to provide a language which can process information relating to all the aspects of economic and social development and at the same time, give a common dimension to the more specific vocabularies corresponding to each of them. Its aim is therefore still to offer in several widely-spoken languages a common fund of terminology which has been duly tested in the practice of documentary analysis, in which adequate expression is given to the many approaches to development and in which the special vocabularies that translate them extensively find sufficient number of anchor points for an exchange of information among specialised agencies.

But while the purpose of the *Macrothesaurus* has not changed, this is by no means the case for its content, which has been entirely revised and considerably enlarged, to such a point that the 1973 edition, which succeeded the *Aligned List of Descriptors* published in 1969, seems now very much out of date in spite of the service its has given.

Before describing the procedure adopted for this revision and presenting its outcome, we shall say something about the use made of the *Macrothesaurus* during these last five years and the reasons why it has been completely recast. This will help to underline the continuity of an effort which has always been based on broad international co-operation.

PAST USE OF THE MACROTHESAURUS

The last edition of the *Macrothesaurus* was published by the OECD at the beginning of 1973 in four languages— English, French, German and Spanish— and ran into 6,000 copies in all. It was the product of several years' consultation between the international organisations most directly concerned with the problems of development and gave rise to a quite extraordinary demand— for a documentary language likely to interest mainly information services— so that it had to be reprinted in 1974, and no copies have been available for the last two years.

The figure given for the OECD edition is in any case lower than the real distribution. The existence of a number of parallel editions should be noted: a Spanish edition published by the Centro latinoamericano de documentación económica y social in Santiago, Chile, in 1973; a Brazilian edition by the Instituto brasileiro de bibliografia e documentação in Rio de Janeiro in 1974; a Portuguese edition by the Missão de estudo do rendimento nacional do ultramar in Lisbon in 1973; an Arabic edition by the Industrial Development Centre for Arab States in Cairo in 1974; an Iranian adaptation in Farsi by the Iranian Planning Institute in Teheran in 1974; an Indonesian edition by the Institute for Economic and Social Research of the University of Indonesia in Djakarta in 1977; etc.

The uses of the *Macrothesaurus* appear to have taken quite a variety of forms. In the best of cases, it was adopted entirely by an organisation as *the* language for processing its information; this was the case in the OECD (Paris), the ILO (Geneva), the International Development Research Centre (IDRC, Ottawa) and in many international and national organisations concerned with the many aspects of development, such as the Nederlands Documentatiecentrum voor Ontwikkelingslanden, which publishes "Nedo Abstracts" in Amsterdam. In other circumstances, the *Macrothesaurus* provided the foundation on which an organisation built up its own vocabulary: such was the case for UNIDO (Vienna), a good half of whose thesaurus consists of descriptors from the *Macrothesaurus*, but also for UNESCO, including both its general thesaurus and sectoral thesauri (Mass Communication Thesaurus, SPINES Thesaurus, etc.), or the International Trade Centre/UNCTAD/GATT. The *Macrothesaurus* was also used in interrogating data bases, set up elsewhere with its help, by information services at the disposal of developing countries: the Development Enquiry Service, formerly attached to the OECD Development Centre, or the Development Reference Service, which currently operates in the Society for International Development. Finally, it acted as a multilingual terminology bank for many documentation centres and translation services wishing to keep to a standardized vocabulary.

It is therefore, to a large extent, thanks to the *Macrothesaurus* that a certain discipline has been maintained in the processing of information relating to development and that co-operative practices have been adopted or strengthened in the organisations responsible for such processing.

REASONS FOR A REVISION

But this discipline and these practices did not in any way mean that the language must be preserved in its original state. A thesaurus must always correspond to the information to be processed, and the more the instrument was used, the more it became evident that it had to be amended to take account of new requirements.

In fact, the situation has evolved appreciably since the 1973 edition.

In the agencies which made the *Macrothesaurus* the instrument for their information processing, needs were perceived which the language could not satisfy. Quite a large number of additions, but also modifications were made to the descriptors. These were usually notified to a network of correspondents; but in the absence of an inter-organisational system for permanent management of the documentary language, they could not be jointly examined and no generally acceptable decision was taken about them. Hence differences and incompatibilities built up over the years and soon made it necessary to begin an overhaul.

Furthermore, new thesauri more or less directly connected with economic and social development have made their appearance during the last five years. Some of them, such as the *Thesaurus of Industrial Development Terms,* whose 3rd bilingual edition (English-French) was published by UNIDO in 1976, and the *ILO Thesaurus* (2nd edition in 1978), are directly derived from the *Macrothesaurus;* others taken it more or less strict by into account, like the *Mass Communication Thesaurus,* the *Thesaurus for Information Processing in Sociology,* the *UNESCO Thesaurus,* the *UNESCO/IBE Education Thesaurus,* the *SPINES Thesaurus,* all five of which are prepared under UNESCO auspices, or the *EUDISED Multilingual Thesaurus for Information Processing in Education* and the *Cultural Development Thesaurus* published by the Council of Europe. In addition to these published thesauri, several are in preparation: the *Population Multilingual Thesaurus,* the *International Thesaurus of Cultural Development,* etc. The older the reference to the *Macrothesaurus,* the greater the risk of distortion. The common language must therefore learn from these new contributions and harmonize them as far as possible in order to continue to play its regulating role.

Nor can it be overlooked that development issues have changed profoundly in these last few years. The aspiration to a "new international economic order" has altered their terms. Certain descriptors relating to "development aid" are now called in question. The "developing countries" themselves have become "economically less developed countries" or, again, "countries more seriously affected" than others by the economic crisis. New international organisations have emerged: countries have changed their names.

Moreover, certain sectors which were not much in evidence in the *Macrothesaurus* have become important enough, because of the information systems now relating to them and the discussions concerning them, to warrant increasing the share allotted to their special terminologies. Science policy, environment, health, population, quality of life, habitat and cultural development not only call for a larger number of usable descriptors relating to them, but for changes in the general structure of the vocabulary in order to cater more satisfactorily for the new information needs concerning them.

Lastly, the projected International Information System for the Development Sciences (DEVSIS), following a feasibility study carried out in 1975 under the aegis of the IDRC, the ILO, the OECD, the United Nations Department of Economic and Social Affairs, the United Nations Development Programme (UNDP) and UNESCO, as well as the creation in November 1976 in the United Nations Consultative Committee on Administrative Questions of an Informal Task Force on Terminology were further inducements in complete harmony with the international co-operation established not so long ago, to review this documentary language which has proved so beneficial to every organisation.

A procedure for revising the *Macrothesaurus* was therefore worked out in Summer 1976 and became operative by the end of that year.

PROCEDURE ADOPTED

In October 1976, an agreement was first signed between the IDRC and the OECD Executive Directorate under which the former financed the revision of the documentary language, while the OECD through its Automated Documentation Unit drew up the computer programmes for the compilation and management of a multilingual thesaurus. This agreement was renewed the following year and was to permit publication of the revised edition of the *Macrothesaurus* in three languages: English, French and Spanish.

The "Maison des Sciences de l'Homme" in Paris, which had already contributed to the first edition of the *Macrothesaurus,* was once again closely associated with the work; it provided technical assistance and the guarantee of methods which it had itself evolved in preparing many documentary languages.

The work of revision comprised several phases.

It was based, to begin with, on broad consultation with those who had been the first artisans of the *Macrothesaurus* before becoming its principal users. A first meeting was held in December 1976 at the ILO in Geneva, and all the United Nations agencies with their headquarters in that city were also invited. Talks were held in April 1977 in Rome with those responsible for FAO information system. Contacts were established with the United Nations Dag Hammarskjöld Library, the World Bank, UNESCO and the International Atomic Energy Agency. Lists indicating the frequency with which *Macrothesaurus* descriptors are used were received from the ILO, the International Occupational Safety and Health Information Centre, OECD, IDRC, FAO and UNIDO. Proposals for additional descriptors as well as suggestions for possible modifications were also received from these organisations, as well as from the International Bureau of Education, the Nederlands Documentatiecentrum voor Ontwikkelingslanden, the African Studies Centre of the University of Warsaw, the Central Statistics Bureau of Hungary, etc. Similarly, institutions representing sectors which had hitherto not been well covered in the *Macrothesaurus* were also consulted: the United Nations Environment Programme, the Committee for International Co-ordination of National Research in Demography, the Secrétariat des Missions d'Urbanisme et d'Habitat, etc. All these approaches, lists and suggestions elicited a fairly clear idea of the uses which had been made of the vocabulary over the last five years and the amendments which it now needed.

In the second stage, thesauri published since 1972 and geared in any way to economic and social development were attentively examined. In each of them, two parts were distinguished, the first concerning descriptors which because of their specific nature or marginal interest were clearly not relevant to the *Macrothesaurus,* and the second containing descriptors that might be considered for insertion.

All the information concerning possible additions was then classified according to the *Macrothesaurus*, first by major topic and then in the light of its divisions and subdivisions. The work of revision was then launched in detail: deletion, modification and addition of descriptors, search for foreign-language equivalents, but also an exhaustive analysis of relations between descriptors, and sometimes a change in the distribution by subject when the great influx of new descriptors called for a different type of structuring.

At the same time, the OECD Automated Documentation Unit, under the direction of Mr. Patrice Taupin, drew up a complex set of programmes for the permanent computerised management of a multilingual thesaurus. This set of programmes, which is almost unique, had been planned at the very start of operations and was not only to control computerised data input but to authorise the modifications which these data were to undergo in the course of the work, carrying the changes considered necessary over into the different languages at all descriptor relationship levels.

Owing to the help thus provided by computer science, a first printout of the revised *Macrothesaurus* was obtained as early as Summer 1977. It was sent all over the world to the information services most interested in its preparation and was discussed at a meeting held by the OECD in Paris from 5th to 7th October 1977. Mr. Maurice Jacomet, Executive Director of the OECD, opened this meeting, which was then chaired by Mr. John Woolston, Director of the Information Sciences Division of the IDRC, and attended by many participants from these two organisations as well as representatives of other international organisations such as the United Nations, the ILO, UNESCO, FAO, the ECLA's Centro latinoamericano de documentación económica y social (CLADES), WIPO, WHO, the ITC/UNCTAD/GATT, the SMUH, the Commission of the European Communities, the European Parliament and national institutions such as the Maison des Sciences de l'Homme (Paris), the Institute for Economic and Social Research (Djakarta), the Deutsche Stiftung für internationale Entwicklung (Bonn), the Nederlands Documentatiecentrum voor Ontwikkelingslanden (Amsterdam), the Association française des instituts de recherche sur le développement (Paris), the Institute of Development Studies (Brighton) and others.

The role played by this meeting was particularly important in that it led to closer participation by the organisations represented in the joint preparation of *Macrothesaurus* and that it attracted other contributions, including those from the United Nations Environment Programme (Nairobi), the International Bureau of Education (Geneva) and the Commission of the European Communities (Brussels). After the meeting and during the following months, a great many new suggestions were received which were gradually taken into account; a preliminary critical review of the Spanish version by the CLADES was also received. This was all to such good purpose that by May 1978 we had a second version of the revised vocabulary which was in turn subjected to a thorough scrutiny in Paris, New York, Geneva, Brussels, Ottawa and Santiago.

Lastly, the editor of the *Macrothesaurus* attended a working meeting on the revised edition with IDRC representatives during the first fortnight of July 1978. This meeting was arranged in Bogota by the CLADES and brought together representatives of the information services in most of the Latin American and Caribbean countries. The Spanish version was once again carefully screened. In order to correspond to the region's specific requirements, certain expressions were modified some descriptors were added and others deleted. The IDRC representatives having for their part put forward a good many proposals, a final revision of the three versions was then carried out. This provided a happy conclusion to what could only be a collective work, which was then continued for two days in New York in the United Nations Department of Economic and Social Affairs before a fair-copy of the manuscript was produced in the Maison des Sciences de l'Homme, followed by a last phase of data processing in the OECD by the Automated Documentation Unit.

DESCRIPTION OF THE NEW EDITION

The new edition differs from the last on five main counts: structure of the thesaurus, field covered, choice of national languages, number and form of the descriptors, printing.

1. *Structure of the thesaurus*

It is now no longer in two parts but in four, which provide as many different approaches to the relationship between descriptors.

The first part gives these and any synonyms in alphabetical order in each volume's language of publication. Each descriptor is accompanied by its equivalents in the two other basic languages of the thesaurus and a number referring to the subject or subtopic to which it is related in the second part. It is followed, where necessary, by a scope note (SN) and references to the synonymous (UF), generic (BT), specific (NT) or associated (RT) descriptors with which it is related. This alphabetical part therefore contains all the information which may be required on the significance of the descriptors themselves.

For the convenience of persons responsible for documentary analysis, we have decided to put this at the front of the thesaurus. Regrettable though this practice may be, experience in fact shows that the analyst's first reflex is to check the alphabetical part of the thesaurus to see whether the descriptors which come to his mind on reading a text do exist. It would no doubt be more useful if he were to look first for the subject suggested by this text: he would find in the subject part of the thesaurus the most useful descriptors which he was not always able to remember. But it is a fact that analysts take the opposite approach and, at the risk of reducing the usable vocabulary to what they can remember, which may not be much, they succumb to the temptation of the alphabet. We considered it pointless to fight against nature and have chosen instead to go along with it. Who knows, if analysts find things so easy, they might be prompted to consult the second part too!

The latter presents the descriptors and their synonyms by subject and sub-topic. When compiling it, we used the same principles as are defined in the previous edition. The main lines of descriptor distribution by affinity of meaning are in any case the same, in harmony with the specialisation of the institutions which have been using the ***Macrothesaurus*** for some years. In order to make the volume less bulky, we have avoided repeating the information given in the alphabetical part for descriptors arranged by subject; this makes for easier reference, while emphasizing that the two parts are complementary, and it is quite simple to go from one to the other, using in one case the number of the subject and the alphabetical order in the other.

The third part arranges the descriptors according to their hierarchical relationship. All the top terms are listed with all the specific descriptors subordinate to the latter themselves being placed at their different levels of specificity.

Finally, the fourth part is a permuted descriptors index which supplements the alphabetical classification given in the first part since it provides access to composite descriptors through their respective elements taken one by one.

2. *Field covered*

This is much broader and, at the request of users and in the light of the information to be processed, many sectors are developed further than in the previous edition. This is particularly true of population, health and environment, but also of cultural development, communication, education, energy conservation, etc.

This pragmatic approach to the field covered is sufficiently exemplary to merit a moment's attention. It may in fact remove one of the main obstacles to the design of certain international information systems.

One is banned to be surprised at the importance attached in the preliminary studies to theoretical discussion on the scope of the documentary language. Quite frequently, the enumeration of the subjects to be covered, the statement of the problems, the definition of sectors and the placing of surrounding barriers are given as prerequisites, and there are quite a few examples of a project encountering these stumbling-blocks.

Now while it is true that a thesaurus cannot in itself suffice to create an information system, it is also true that the design of such a system, no matter how precisely its objectives may be set down or its mechanisms described, cannot give form and content to the documentary language itself. The latter's raison d'être first depends on the data to be processed and the data medium consisting of the documents considered useful. Of course, the criteria of this usefulness are built into the system, but there they are necessarily formulated in quite general terms which cannot really determine the vocabulary. It often happens that information regarded as valid in its reference to the system appears in relation to other information not covered by such reference; in order to be entered without giving use to distortion it must therefore be embodied in a documentary language which departs from the beaten track, sometimes in a quite unpredictable direction. Compiling such a language is a matter of actual practice and must take account of the experience gained both in analysing documents as accurately as possible and in searching for the best information to answer users' questions. To allow for appropriate broader development, it cannot be laid down initially in the system analysis.

A thesaurus cannot emerge fully equipped from a simple glance at a field of application, and this field itself cannot be exactly delimited as long as it has not been ploughed from top to bottom by the thesaurus. What counts to begin with, therefore, is a certain practice of documentation. This does not of course start at random; it finds assurance in the information needs to be met and is based on the documents required, but the actual perspective which such needs describe and the flow of information carried by the documents include a certain unpredictable element.

It is of course possible to consider that this element is now small in the ***Macrothesaurus*** since it has been put to the test for five years, but it would be a mistake to think that it does not exist. Who can tell exactly now what place biology, for example, will hold in the development process in ten years' time and prescribe the corresponding vocabulary?

3. *Choice of national languagues*

The three languages adopted for the revised ***Macrothesaurus*** are those regarded as particularly important in the DEVSIS study: "We are prepared to assert that the group of languages composed of English, French and Spanish are the most significant and widely used in the development literature and by the development community"*.

However, there is nothing against the possibility of later editions in other languages at national or regional level according to requirements and with the agreement of the OECD Executive Directorate.

The French, English and Spanish languages were given equal status at every stage in compiling the ***Macrothesaurus***. It was prepared simultaneously in all three languages, each making its contribution to the common edifice. Thus, there is no source-language and no target-language. Every effort has been made throughout the operations to maintain a balance between the three language areas. In each of them account was taken of the development discourse in its effective form and only afterwards was equivalence sought between descriptors. These equivalences are sometimes a long way from translations, but this is because we have rejected any standardization, which is always arbitrary. It seemed sufficient that the terms taken in three different languages should correspond to the same concept; there was no need to pour them into the same mould. We have therefore usually taken the current expressions in each language. Any other approach to compiling a multilingual thesaurus would mean giving one language preference over the others; this introduces a bias into the documentary language which very soon becomes intolerable for users of the subordinate languages.

---

* "DEVSIS Preliminary Design of an International Information System for the Development Sciences" Ottawa, IDRC, 1976, p. 51.

4. *The descriptors*

The number of descriptors has almost doubled from one edition to the next. Since we have also deleted or changed some of the old descriptors which were found irrelevant, it is easy to see the extent of the revision.

With use, a certain amount of preco-ordinations became necessary; we have adopted them when they permitted more precise documentary analysis and made it unnecessary to include too many cross-reference between descriptors in order to search for information.

Many descriptors have changed from the singular to the plural in accordance with the UNISIST recommendations and the practice adopted in most of the English-language thesauri. We have nevertheless kept in the singular descriptors which should according to the norm have been in the plural. They are the ones concerning the nature of documents: bibliography, manual, meeting report, conference paper, etc. Since they are customarily used to describe particular document being analysed, it goes without saying that they must be in the singular. In any event, this question of the use of the singular or the plural, which has long been a difficulty for information services that have elected to incorporate descriptors in the text of their abstracts, is not so important: either form, or even abbreviated descriptors, can be used for information retrieval by computer.

The number of relations between descriptors has been increased in order to overcome the disadvantages of an arrangement by subject which usually gives descriptors one place only in the thesaurus, but also in order to facilitate the compilation of microthesauri and to open new paths for users in the search for information. We have paid special attention to hierarchical relations, which give the documentary language its principal framework, although we did not consider it necessary to give special emphasis to terms governing hierarchical linkages in the alphabetical part of the thesaurus; they are sufficiently revealed in the part dealing with them.

Lastly, at the request of several information services, especially in Latin America, we have prepared new scope notes for descriptors whose meaning might give rise to ambiguity. But we have refrained from going too far in this direction and putting redundancies into the thesaurus, since we consider that the descriptors are generally given with sufficient precision through their language equivalence, their inclusion in a given subject and their network of relations.

5. *Printing*

The new version of the *Macrothesaurus* has been filmset from the magnetic tape printed by the computer. The text is entirely printed in capital letters since we wished to retain the same graphic status for the descriptors in the different parts of the thesaurus; but the words are in lighter or heavier type according to the place occupied by the descriptors and whether they refer to the descriptors themselves or to their synonyms. We hope that this will make it easier to consult the work.

DESTINATION

The *Macrothesaurus* is intended primarily for information centres or services concerned with economic and social development as a whole or with a particular aspect of it.

Experience has shown that it was particularly relevant to the requirements of institutions primarily conceived with development on an international (IDRC), regional (CLADES) or national scale (Ministries of Planning, planning institutes); or, again, institutions working in many fields (OECD) or handling information from a great variety of sources (ILO Library).

Contrary to widespread opinion, it is not necessary to have a computer in order to take advantage of the *Macrothesaurus*. It is intended for use in developing countries, notably by national documentation centres which have been set up recently and wish to control the information flows in the main social science sectors. Of course, all the possibilities of the documentary language call for an appropriate computerised infrastructure if they are to be fully exploited; but the selection of tried descriptors offered by the *Macrothesaurus* and the arrangement of these descriptors by subject are in any event very useful; by electing to base documentary work on them from the start, these centres would also increase their chances of one day belonging to an international network.

The *Macrothesaurus* is also intended for information services concerned with development from the sectoral angle. It provides them with the basic vocabulary to express their special interests and they can derive from it a microthesaurus for their specific needs. They will also find material in it to overcome their own limitations, to describe when necessary information with which they are less familiar and to consult data banks established in other sectors but likely to contain information which is nonetheless relevant to themselves.

PERMANENT MANAGEMENT

If the *Macrothesaurus* had been managed on a permanent basis since 1973 and if it had been amended daily to keep abreast of the information supplied and the requests received, it might have been possible to avoid the considerable work required over the last two years for its revision. The necessity for permanent updating was quite clear from the start, but the conditions for carrying it out were never satisfied.

This is definitely a pity, but the final outcome is not entirely without benefit. After all, if the *Macrothesaurus* has been subjected to the shock of information supply and demand, if a world-wide documentary analysis has shown the need for its adaptation and if material for improving it has been found in its actual operation, this is because it has indeed been used. There is thus no further need to furnish proof of its use. Information is a risk for any documentary language. Some take the risk, while others do not, thus keeping their hands clean but also demonstrating that they have no ground to stand on.

The experience gained with the *Macrothesaurus* shows that anyone wishing to introduce a thesaurus must ensure from the start that there are built-in mechanisms for amending it. For efficient strategy, these mechanisms should be at three levels.

One of them corresponds to data acquisition. A first possibility of altering the vocabulary should be established in the documentary analysis offices. Analysts must have a certain latitude to expand the thesaurus so that it always matches what is being said in documents. This latitude assumes, of course, that they have full mastery over the instrument and that they are familiar with its every possibility; but once this condition has been fulfilled, nothing should prevent them from borrowing from the language of documents themselves those elements which will fill any gaps in the thesaurus. Such borrowing will only be temporary, however, if the analytical unit responsible belongs to a network. At the same time as they are embodied in abstracts or appear in indexes with a special sign, the additional descriptors will at the same time be entered on worksheets; they will be subjected to a formal acceptance procedure before being reported to other units.

The second level concerns the production of other documentary languages in the field of reference. When it relates to such an extensive and varied process as economic and social development, this production cannot fail to be on a large scale, at least judging by the last five years. It is essential to take it into account, to establish relations between one thesaurus and the next and to see that the interaction of the documentary languages develops in such a way as to be of benefit to everyone.

The third level concerns the request for information. A mechanism should be set up to make the documentary language take account of the terms in which that request is made. The effect must be checked on the descriptors themselves, but still more no doubt on the relations which the thesaurus establishes between them from the outset. It is in fact on these relations that search strategies normally rely. It is important, even though this has not hitherto received much attention, to keep track of the relations used for giving a reply so that they can be emphasized if necessary in the thesaurus or inserted if by chance they are missing.

The operation of these mechanisms comprises in its turn two requirements:

The first is for an institutional framework for the permanent management of the language. It is difficult to see how the functions described can be carried out if they are not taken over by a responsible agency.

The ups and downs of the *Macrothesaurus* are an excellent illustration of this problem. The reason why it has suddenly become necessary to revise completely a vocabulary on which so many documentary ventures are based, and at the risk of disturbing their operation, is because there has never been a place where certain essential operations could be *centralised*. Not that institutional support was really lacking: the OECD, the ILO, the IDRC and many other institutions have managed the *Macrothesaurus*, but each of them has done so on its own account. This has not only been responsible for discrepancies which were difficult to remove after the event, but important tasks have been neglected, such as the consideration of new thesauri. If these tasks are to cease being neglected and if the revised *Macrothesaurus* is to open the door for a fresh start, then it is merely necessary to appoint a caretaker institution by common agreement to initiate and supervise the management of the documentary language.

If an arrangement were concluded along these lines, it would probably have some influence on the introduction of an international information system for development as envisaged by the DEVSIS study. Being established at data processing language level, the co-operation on which such a system is based would be more than half achieved. In this respect too, a pragmatic approach may have its good points.

The second requirement for permanent management of the *Macrothesaurus* is for a computerised terminological data base. This should include, together with the revised *Macrothesaurus* in three languages, the various thesauri of most direct interest to economic and social development. A number of them are computerised and it would be relatively easy to obtain the appropriate magnetic tapes.

The data base could be consulted by means of an inverted file covering all the descriptors and would give much information. By merely retrieving a descriptor, the operator would immediately discover, the thesauri to which it belongs, its foreign language equivalents, the relations associated with it in different places, the scope notes applying to it and so on. Such information would be extremely valuable. To begin with, it would provide an excellent touchstone for the management of the *Macrothesaurus*: when considering the admission of a new descriptor, it would be possible to check immediately whether it has been accepted elsewhere, to what extent, its foreign language equivalents, etc. But, above all, it would make it possible to detect any incompatibilities between the thesauri and to prescribe some way of correcting them, with a view to achieving the integration of information systems and the convergence of services to users.

If we had had such a terminological data base, the revision of the *Macrothesaurus* would have raised far fewer problems.

⁂

It is no doubt too soon to assess the usefulness of this revision. All we can say is that it comes at the right time. The exchange of information seems today more than ever to condition development, and the instruments for such exchanges have become so numerous that is was urgent to have a framework for their integration.

It would not have been possible to prepare that framework without the considerable help we have received. The compilation of the *Macrothesaurus* had been a collective operation and this applies even more to its revision. There is no room here to list all the 50 or so institutions, nor all the persons who took an active part in this revision. It is only right, however, to state that it would not have taken place if the IDRC, the OECD and the Maison des Sciences de l'Homme had not provided the means to start with, and, in this respect, we are particularly grateful to Mr. John Woolston, Mr. Maurice Jacomet and Mr. Clemens Heller for having taken the necessary administrative decisions. Our thanks go also to Mr. George Thompson of the ILO, Mrs. Martha Beya of the CLADES and Mrs. Elizabeth Miller of the United Nations, who provided us with useful contacts and who arranged and chaired the working meetings held in Geneva, Bogota and New York. We also wish to thank Mrs. Gisèle Morin-Labatut and her assistants at the IDRC for having shared the donkeywork of terminological revision with us. Finally, we should like to express our special gratitude to the OECD Automated Documentation Unit which, under the direction of Patrice Taupin, prepared the computerised management programmes for a multilingual thesaurus, undertook the data acquisition and processing and produced the new version of the *Macrothesaurus*.

31st October 1978
